

DataGARD™ labels provide laminated serialized barcode identification, ideal for labeling of heavy-duty equipment, electric components, and automotive underhood parts that need a unique identifier for asset tracking or maintenance, while ensuring the information is protected.

They can withstand a range of external factors that would cause most other labels to fail. The labels and their individual, serialized information, are protected against exposure to harsh chemicals and solvents, abrasion, in addition to scratching and friction, and will remain legible and scannable.

Improve Efficiency

Supply us with your database and we'll take care of printing your labels. Keep your operations running without the added time and monetary cost of buying and using label printers and software.

Ensure Durability

All labels are covered with a high-quality laminate layer creating a physical barrier between your data and harsh environments. This creates an indestructible label when combined with our durable label stocks and adhesives.

Customize

These laminated labels can be printed with serialized numbers, 1D and 2D barcodes, alphanumeric text as well as, full-color designs and logos allowing you to visualize and have instance access to the information.

Use DataGARD™ in Industrial Applications

- Waterproof, weatherproof, wear & tear proof
- Resistant to chemical exposure and abrasion
- Labels stay clear even under heat and covered in oil, water, and dirt
- Identify circuit boards and electrical panels
- Asset tracking in electronics, forestry, construction, manufacturing, mining, and more
