Automotive
## Labeling Solutions

Labels for Hard-to-Stick Surfaces

The latest advancements in the automotive industry have led to the development of sleeker, self-cleaning coatings, that protect against dirt and spills. However, these surfaces are more difficult to label and prone to outgassing. To solve this issue, IndustriTAG has developed labels that adhere firmly to hard-to-stick surfaces, including low surface energy (LSE) plastics, such as silicone coated and silica treated surfaces, fabrics and fibers, while also providing excellent resistance against grease and extended UV exposure. The performance of our labels has been confirmed by environmental testing against rigorous conditions.

Labels for Low Surface Energy (LSE) Plastics

SKU#	Inches (W x H)	mm (W x H)	Core	Labels/Roll
ZPRF-242C1-0.5WH	1.75" x 0.75"	44.5 x 19.1	1"	500

Electrical and Wire Labels

IndustriTAG offers safety and identification solutions for the electrical industry, including labels for cables, wires, as well as warning labels for safety on the worksite. Blank thermal-transfer or laser printable cable labels are available, as well as custom solutions, including preprinted labels. Our electrical labels are compliant with Europe (EU) Restriction of Hazardous Substances (RoHS).

TIRE LABELS

Tire Labels

Our thermal-transfer tire labels for indoor and outdoor use have an ultra-strong permanent adhesive for rubber surfaces making them ideal for inventory control and tire storage. These barcode labels firmly to a variety of rubber surfaces, perfect for identifying tires and rough tire tread. They can be produced in any size, color, or configuration, with company logos, graphics, and serialized data as well.

Heat-Resistant Labels

Our high-temperature resistant labels are ideal for identifying various containers and surfaces. They have a temperature range of -60°C to +150°C (-76°F to + 302°F) and can be applied to metal, plastic, and glass surfaces, withstanding exposure to alcohols, as well as UV and gamma irradiation. These labels are waterproof, weatherproof, and thermal-transfer printable, which ensures barcodes are printed with high-resolution and remain legible and scannable for asset tracking and inventory control. Heat-resistant labels for laser and inkjet printers are also available.

Acid and Base-Resistant Labels

Our labels are designed to resist exposure to substances spanning a wide pH range, including battery acid, etchants, alkaline cleaning agents, bases, and other concentrated acids and bases. These permanent, acid and base-proof labels are ideal for identifying containers used to store highly corrosive reagents, including aircraft cleaning chemicals used in various industries as well as in pest and weed control solutions used in agriculture. Compatible with all common thermal-transfer barcode label printers, they can be printed using our XAR-class of ribbons with barcodes and other relevant information allowing them to withstand exposure to acids and bases without additional protection or lamination.
